SUMMARY

After 25 years of hard labor and a severe back injury, I thought I might learn another trade- programming. I have no relevant work experience in this field so I have made a website, BuffBob.com, that showcases my talents. I built my website using python and flask and maintain the server for it and the other programs found at that site. It has links to other webapps(be sure to check out Tweestmasters and the bird image scraper and classifier), code projects, my github and dockerhub, and other links. I built this page to act as the main way to display my talents given that I may have arrived here from a different path than most and a resume kinda seems pointless at this time.

Relevant Computer Skills

* Oracle Certified Associate, Java SE 8 Programmer

* Strong Core Java skills. Experienced with FX, java web programming and Spring Boot, Data, Security, and JSP/Hibernate.

* Intermediate SQL skills and experience with postgres and mysql server management. Experience with python and java ORM's. Some nosql.

* Solid Data Analysis and Python skills

* Machine and Deep Learning with Tensorflow/keras, scikit-learn, and more...

* Open Source GIS, Remote Sensing and Imagery including lidar

* The 'Basics'- git, Linux, servers, docker, C, javascript, frontend, react, maven, lots of ides and more...

What makes me a good hire

As a rancher and self-taught programmer-- I am a problem solver with an unique set of experiences and skills.
